SUMMARY

Full Stack Engineer with 5+ years of production TypeScript (React, Node.js, NestJS) on a SaaS recruiting platform with 100,000+ registered and 10,000 daily signed-in users. Owns architecture and releases for six React apps and mentors developers. Delivered a NestJS and React rewrite of a 16-year-old PHP app.

EXPERIENCE

ITRDev

03/2021 - Present

SaaS recruiting platform for colleges, athletes and clubs (100,000+ registered users)

Full Stack JavaScript Developer 05/2024 - Present

- Made backend services 2x faster by fixing N+1 queries and optimizing SQL (batch loading, joins, pagination, field selection)
- Cut load time of the most visited page 2x: DOM nodes from 6,612 to 1,123, form fields on load from 187 to 2
- Reduced user-reported problems 3x in 12 months by rolling out Sentry (source maps, session replay, Error Boundary with feedback form) and fixing the most frequent errors
- Rewrote a 16-year-old PHP app in NestJS and React in under a year: three-layer architecture, existing database kept, schema and data migrations
- Owned architecture, library choices and releases for six React and TypeScript apps built from one frontend monorepo with feature sets per product
- Reviewed code, onboarded and mentored developers; documented architecture decisions and wrote the release checklist
- Built REST APIs with versioning, validation (class-validator, Zod), Swagger, Keycloak login and SSO, and endpoint access by scope across several databases; covered with unit and integration tests in GitLab CI
- Built the athlete statistics API, multi-file AWS S3 upload and batched bulk subscriptions; used Redis for caching, sessions, queues and rate limiting
- Built a typed analytics event layer for the paid flow: Segment, GA4, PostHog
- Built an embeddable recruiting widget builder for club websites
- Introduced an AI-assisted development workflow (AI-DLC, adapted from AWS): plan review, separate AI agents for implementation, debugging and review

Frontend Developer 06/2021 - 05/2024

- Built drag-and-drop recruiting boards for college coaches from scratch, the core tool of the coach app: filter dividers, automatic placement, tested state functions, optimistic moves with rollback
- Built web apps for live volleyball streaming: HLS player with recovery to the live edge, WebSocket scores (~1 s delay), Stripe payments
- Built admin panels with large editable lists, drag-and-drop and ApexCharts dashboards; migrated legacy Angular apps to React and TypeScript

Trainee Full Stack JavaScript Developer 03/2021 - 06/2021

- Promoted to Frontend Developer after 3 months

SKILLS

Backend
Node.js, NestJS, REST, Swagger, MySQL, PostgreSQL, Redis, Keycloak, AWS S3, TypeORM, Sequelize, Knex

Frontend
React, TypeScript, Zustand, Redux, TanStack Query, React Hook Form, Zod, Material UI (MUI), Ant Design, shadcn/ui, Tailwind CSS, ApexCharts, Next.js (pet projects)

Testing and monitoring
Jest, Sentry, Vitest, OpenTelemetry, Grafana

Tools
Docker, GitLab CI/CD, Segment, GA4, PostHog

AI-assisted development
AI-DLC, Claude Code, Cursor

EDUCATION

Master's Degree in Computer Engineering
Kharkiv National University of Radioelectronics
2021 - 2022

Bachelor's Degree in Electrical Power Supply
Ukrainian State University of Railway Transport
2018 - 2021

LANGUAGES

English	B2
Ukrainian	Native
